COMPUTER SCIENCE & ENGINEERING

(w.e.f Session 2018)

DEPARTMENT OF COMPUTER ENGINEERING

FACULTY OF INFORMATICS & COMPUTING

YMCA UNIVERSITY OF SCIENCE AND TECHNOLOGY

FARIDABAD

YMCA UNIVERSITY OF SCIENCE & TECHNOLOGY

VISION

YMCA University of Science and Technology aspires to be a nationally and internationally acclaimed leader in technical and higher education in all spheres which transforms the life of students through integration of teaching, research and character building.

MISSION

- To contribute to the development of science and technology by synthesizing teaching, research and creative activities.
- To provide an enviable research environment and state-of-the art technological exposure to its scholars.
- To develop human potential to its fullest extent and make them emerge as world class leaders in their professions and enthuse them towards their social responsibilities.

DEPARTMENT OF COMPUTER ENGINEERING

VISION

The department aims to make a place at both national and international level by producing high quality ethically rich computer engineers conversant with the state-of-the-art technology with the ability to adapt the upcoming technologies to cater to the ever changing industrial demands and societal needs. It endeavours to establish itself as a centre of excellence by contributing to research areas having IT impact on the people's life and nation's growth.

MISSION

- To provide the future leaders in the area of computer engineering and information technology through the development of human intellectual potential to its fullest extent.
- To enable the students to acquire globally competence through problem solving skills and exposure to latest developments in IT related technologies.
- To educate the students about their professional and ethical responsibilities.
- To ensure continuous interaction with the industry and academia through collaborative research projects.

ABOUT THE PROGRAM

The Master of Technology (M.Tech) program in Computer Science and Engineering is a two year post graduate program which is designed with an aim to provide the students in depth knowledge of various advanced concepts of computer engineering.

The program provides comprehensive knowledge which is sufficient enough to enhance the critical thinking skills and research ability of the students. Besides the theoretical and laboratory based curriculum, students complete an advanced programming project in the final year of the program including one full semester for research work.

PROGRAMME EDUCATION OBJECTIVES

PEO1	To enhance the competence level for tackling real world problems in industry, academia and research organizations
PEO2	To sharpen problem solving ability using in depth analysis based upon state-of-the-art concepts and technology
PEO3	To create awareness about professional ethics, multidisciplinary approach, entrepreneurial thinking and effective communication.

PROGRAMME OUTCOMES

PO1	Ability to learn & apply advance concepts to generate novel solutions for solving complex computational problems.
PO2	Ability to effectively adopt & adapt recent technology for finding efficient solutions to the contemporary problems.
PO3	Ability to act as an effective human resource in industry & academia for socio-economic growth.
PO4	Ability to pursue research and create knowledge to meet the present and upcoming challenges

CODE: MCS-18-101

SUBJECT NAME: Mathematical Foundation of Computer Science

NO OF CREDITS: 3

M.TECH SEMESTER I	SESSIONAL:	25
L T P	THEORY EXAM:	75
3 0 0	TOTAL :	100

Pre-requisites: Discrete Mathematics

Course Objectives:

1. To understand the mathematical fundamentals that is prerequisites for a variety of courses like Data mining, Network protocols, analysis of Web traffic, Computer security, Software engineering, Computer architecture, operating systems, distributed systems, Bioinformatics, Machine learning.
2. To develop the understanding of the mathematical and logical basis to many modern techniques in information technology like machine learning, programming language design and concurrency.
3. To study various sampling and classification Problems.

MODULE-1:

Probability mass, density, and cumulative distribution functions, Parametric families of distributions, Expected value, variance, conditional expectation, Applications of the univariate and multivariate analysis, Central Limit Theorem, Probabilistic inequalities, Markov chains

MODULE-2:

Random samples, sampling distributions of estimators, Methods of Moments and Maximum Likelihood.

MODULE-3:

Statistical inference, Introduction to multivariate statistical models: regression and classification problems, principal components analysis, The problem of over fitting model assessment.

MODULE-4:Graph Theory

Isomorphism, Planar graphs, graph colouring, hamilton circuits and euler cycles. Permutations and Combinations with and without repetition. Specialized techniques to solve combinatorial enumeration problems

MODULE-5:Computer science and engineering applications

Data mining, Network protocols, analysis of Web traffic, Computer security, Software engineering, Computer architecture, operating systems, distributed systems, Bioinformatics, Machine learning.

MODULE-6:

Recent Trends in various distribution functions in mathematical field of computer science for varying fields like bioinformatics, soft computing and computer vision.

Course Outcomes:

After completion of course, students would be able to:

- a. To understand the basic notions of discrete and continuous probability.
- b. To understand the methods of statistical inference, and the role that sampling distributions play in those method.
- c. To be able to perform correct and meaningful statistical analyses of simple to moderate complexity.

4. Alan Tucker, Applied Combinatorics, Wiley

CODE:MCS-18-102

SUBJECT NAME: ADVANCED DATA STRUCTURES

NO OF CREDITS: 3

M.TECH SEMESTER I	SESSIONAL:	25
L T P	THEORY EXAM:	75
3 0 0	TOTAL :	100

Pre-requisites: UG level course in Data Structures

Course Objectives:

1. The student should be able to choose appropriate data structures, understand the ADT/libraries, and use it to design algorithms for a specific problem.
2. Students should be able to understand the necessary mathematical abstraction to solve problems.
3. To familiarize students with advanced paradigms and data structure used to solve algorithmic problems.
4. Student should be able to come up with analysis of efficiency and proofs of correctness.

MODULE-1: DICTIONARIES AND HASHING

Dictionaries: Definition, Dictionary Abstract Data Type, Implementation of Dictionaries.

Hashing: Review of Hashing, Hash Function, Collision Resolution Techniques in Hashing, Separate Chaining, Open Addressing, Linear Probing, Quadratic Probing, Double Hashing, Rehashing, Extendible Hashing.

MODULE-2: SKIP LISTS

Need for Randomizing Data Structures and Algorithms, Search and Update Operations on Skip Lists, Probabilistic Analysis of Skip Lists, Deterministic Skip Lists

MODULE-3: TREES

Trees: Binary Search Trees, AVL Trees, Red Black Trees, 2-3 Trees, B-Trees, Splay Trees

MODULE-4: TEXT PROCESSING

String Operations, Brute-Force Pattern Matching, The Boyer- Moore Algorithm, The Knuth-Morris-Pratt Algorithm, Standard Tries, Compressed Tries, Suffix Tries, The Huffman Coding Algorithm, The Longest Common Subsequence Problem (LCS), Applying Dynamic Programming to the LCS Problem.

MODULE-5: COMPUTATIONAL GEOMETRY

One Dimensional Range Searching, Two Dimensional Range Searching, Constructing a Priority Search Tree, Searching a Priority Search Tree, Priority Range Trees, Quadrees, k-D Trees.

MODULE-6:

Recent Trends in Hashing, Trees, and various computational geometry methods for efficiently solving the new evolving problem

Course Outcomes:

- a. Understand the implementation of symbol table using hashing techniques.
- b. Develop and analyze algorithms for red-black trees, B-trees and Splay trees.
- c. Develop algorithms for text processing applications.
- d. Identify suitable data structures and develop algorithms for computational geometry problems.

2. M T Goodrich Roberto Tamassia, Algorithm Design, John Willey, 2002

CODE:MCS-18-106

SUBJECT NAME: MACHINE LEARNING (ELECTIVE I)

NO OF CREDITS: 3

M.TECH SEMESTER I	SESSIONAL:	25
L T P	THEORY EXAM:	75
3 0 0	TOTAL :	100

Pre-requisites:

Course Objectives:

1. To learn the concept of how to learn patterns and concepts from data without being explicitly programmed in various IOT nodes.
2. To design and analyse various machine learning algorithms and techniques with a modern outlook focusing on recent advances.
3. Explore supervised and unsupervised learning paradigms of machine learning.
4. To explore Deep learning technique and various feature extraction strategies.

MODULE-1: SUPERVISED LEARNING (REGRESSION/CLASSIFICATION)

- Basic methods: Distance-based methods, Nearest-Neighbours, Decision Trees, Naive Bayes
- Linear models: Linear Regression, Logistic Regression, Generalized Linear Models
- Support Vector Machines, Nonlinearity and Kernel Methods
- Beyond Binary Classification: Multi-class/Structured Outputs, Ranking

MODULE-2: UNSUPERVISED LEARNING

- Clustering: K-means/Kernel K-means
- Dimensionality Reduction: PCA and kernel PCA
- Matrix Factorization and Matrix Completion
- Generative Models (mixture models and latent factor models)

MODULE-3:

Evaluating Machine Learning algorithms and Model Selection, Introduction to Statistical Learning Theory, Ensemble Methods (Boosting, Bagging, Random Forests)

MODULE-4:

Sparse Modeling and Estimation, Modeling Sequence/Time-Series Data, Deep Learning and Feature Representation Learning

MODULE-5:

Scalable Machine Learning (Online and Distributed Learning)

A selection from some other advanced topics, e.g., Semi-supervised Learning, Active Learning, Reinforcement Learning, Inference in Graphical Models, Introduction to Bayesian Learning and Inference

MODULE-6:

Recent trends in various learning techniques of machine learning and classification methods for IOT applications, Various models for IOT applications.

Course Outcomes:

- a. Extract features that can be used for a particular machine learning approach in various IOT applications.
- b. To compare and contrast pros and cons of various machine learning techniques and to get an insight of when to apply a particular machine learning approach.
- c. To mathematically analyse various machine learning approaches and paradigms.

CODE: MCS-18-302

SUBJECT NAME: Mobile Applications and Services (ELECTIVE I)

NO OF CREDITS: 3

M.TECH SEMESTER III	SESSIONAL:	25
L T P	THEORY EXAM:	75
3 0 0	TOTAL :	100

Pre-requisites: Wireless Communication and Mobile Computing

Course Objectives:

1. This course presents the three main mobile platforms and their ecosystems, namely Android, iOS, and PhoneGap/WebOS.
2. It explores emerging technologies and tools used to design and implement feature-rich mobile applications for smartphones and tablets.
3. It also take into account both the technical constraints relative to storage capacity, processing capacity, display screen, communication interfaces, and the user interface, context and profile

MODULE-1: Introduction

Introduction to Mobile Computing, Introduction to Android Development Environment, Factors in Developing Mobile Applications, Mobile Software Engineering, Frameworks and Tools, Generic UI Development Android User

MODULE-2: More on Uis

VUIs and Mobile Apps, Text-to-Speech Techniques, Designing the Right UI, Multichannel and Multimodal Uis, Storing and Retrieving Data, Synchronization and Replication of Mobile Data, Getting the Model Right, Android Storing and Retrieving Data, Working with a Content Provider

MODULE-3:

Communications via Network and the Web: State Machine, Correct Communications Model, Android Networking and Web, Telephony Deciding Scope of an App, Wireless Connectivity and Mobile Apps, Android Telephony

Notifications and Alarms: Performance, Performance and Memory Management, Android Notifications and Alarms, Graphics, Performance and Multithreading, Graphics and UI Performance, Android Graphics

MODULE-4:Putting It All Together

Packaging and Deploying, Performance BestPractices, Android Field Service App, Location Mobility and Location BasedServicesAndroidMultimedia: Mobile Agents and Peer-to-Peer Architecture, Android Multimedia

MODULE-5:Platforms and Additional Issues

Development Process, Architecture,Design, Technology Selection, Mobile App Development Hurdles, Testing,Security and Hacking, Active Transactions, More on Security, Hacking Android.

MODULE-6:

Recent trends inCommunication protocols for IOT nodes, mobilecomputing techniques in IOT, agents based communications in IOT

Course Outcomes:

After completion of course, students would be able to:

- a. identify the target platform and users and be able to define and sketch a mobile application.
- b. understand the fundamentals, frameworks, and development life cycle of mobileapplication platforms including iOS, Android, and PhoneGap
- c. Design and develop a mobile application prototype in one of the platform (challengeproject).

NO. OF CREDITS: 3

M.TECH

Sessional:25

L T P

Theory Exam:75

3 0 0

Total:100

Pre Requisite : Computer NEtworks

Course objective

At the end of the course, the students will be able to:

1. Build an understanding of the fundamental concepts of computer networking.
2. Familiarize the student with the basic taxonomy and terminology of the computer networking area.
3. Introduce the student to advanced networking concepts, preparing the student for entry Advanced courses in computer networking.
4. Allow the student to gain expertise in some specific areas of networking such as the design and maintenance of individual networks.

Module I: Introduction

Data Communication: Data transmission, Parallel Transmission, Serial Transmission, Line Encoding Schemes: Unipolar, Polar, Bipolar, Multiplexing techniques: TDM, FDM, Modulation methods: AM, FM, PM, Pulse Code Modulation. Spread spectrum, Concepts of layering, TCP/IP and ISO's OSI reference model. Transmission media.

Module II: Data Link Layer

Error detection and correction, Data link control - Flow and Error control - Sliding window protocol - ARQ schemes, HDLC protocol - Point to Point Protocol, Multiple Access Techniques - Random Access, Controlled Access, Logical Link Control (LLC) and Medium Access Sub-layer functions - LAN standards - IEEE 802.3 (CSMA/CD) - Fast Ethernet - Giga Bit Ethernet, IEEE 802.4 (Token Bus), IEEE 802.5 (Token Ring), IEEE 802.11 (Wireless LAN).

Module III: Network Layer

Inter-networking- Subnetting, Supernetting and Masking , Class full and Classless addressing. Routing - Link state and Distance Vector Routing - Congestion control algorithms - Network Layer Protocols - ARP, RARP, IPv4, ICMP and IPv6. Unicast Routing and Multicast Routing techniques.

Module IV :Transport Layer

Processes to Processes Delivery - Transmission Control Protocol (TCP) - User Datagram Protocol, Stream Control Transmission Protocol (SCTP) - Data Traffic - Congestion Control and Quality of Service - Techniques to improve QoS - Integrated Services - Differentiated Services, QoS in switched networks.

Module V : Session, Presentation And Application Layers

Services, Network security - Security Cryptography, Message confidentiality, message integrity, message authentication, Digital Signature, Entity Authentication, Key Management, Application layer- DNS, E-mail (SMTP), FTP, HTTP, Voice over IP.

COURSE OUTCOMES

After completing this course the student must demonstrate the knowledge and ability to:

- a. Independently understand basic computer network technology.
- b. Understand and explain Data Communications System and its components.
- c. Identify the different types of network topologies and protocols.
- d. Enumerate the layers of the OSI model and TCP/IP. Explain the function(s) of each layer.
- e. Identify the different types of network devices and their functions within a network.
- f. Understand and building the skills of subnetting and routing mechanisms.

CODE: MCS-18-111

SUBJECT NAME: Distributed Systems (ELECTIVE II)

NO OF CREDITS: 3

M.TECH SEMESTER I	SESSIONAL:	25
L T P	THEORY EXAM:	75
3 0 0	TOTAL :	100

Pre-requisites: Database Management Systems

Course Objectives:

1. To introduce the fundamental concepts and issues of managing large volume of shared data in a parallel and distributed environment, and to provide insight into related research problems.

MODULE-1:

INTRODUCTION

Distributed data processing, what is a DDBS; Advantages and disadvantages of DDBS; Problem areas; Overview of database and computer network concepts

DISTRIBUTED DATABASE MANAGEMENT SYSTEM ARCHITECTURE Transparencies in a distributed DBMS; Distributed DBMS architecture; Global directory issues

MODULE-2:

DISTRIBUTED DATABASE DESIGN

Alternative design strategies; Distributed design issues; Fragmentation; Data allocation

SEMANTICS DATA CONTROL

View management; Data security; Semantic Integrity Control

QUERY PROCESSING ISSUES

Objectives of query processing; Characterization of query processors; Layers of query processing; Query decomposition; Localization of distributed data

MODULE-3:

DISTRIBUTED QUERY OPTIMIZATION

Factors governing query optimization; Centralized query optimization; Ordering of fragment queries; Distributed query optimization algorithms

TRANSACTION MANAGEMENT

The transaction concept; Goals of transaction management; Characteristics of transactions; Taxonomy of transaction models

CONCURRENCY CONTROL

Concurrency control in centralized database systems; Concurrency control in DDBSs; Distributed concurrency control algorithms; Deadlock management

MODULE-4:

RELIABILITY

Reliability issues in DDBSs; Types of failures; Reliability techniques; Commit protocols; Recovery protocols

MODULE-5:

PARALLEL DATABASE SYSTEMS

Parallel architectures; parallel query processing and optimization; load balancing

MODULE-6:

ADVANCED TOPICS

Mobile Databases, Distributed Object Management, Multi-databases

Course Outcomes:

- a. Design trends in distributed systems.
- b. Apply network virtualization.
- c. Apply remote method invocation and objects.

CODE: MCS-18-112

SUBJECT NAME: WEB SEARCH AND INFORMATION RETRIEVAL (ELECTIVE II)

NO OF CREDITS: 3

M.TECH SEMESTER	SESSIONAL:	25
L T P	THEORY EXAM:	75
3 0 0	TOTAL :	100

Pre-requisites: Probability Theory, Database Management, Web Programming

Course Objectives

1. To build an understanding of the fundamental concepts of Information Retrieval
2. To familiarize students with the basic taxonomy and terminology of Indices
3. To understand Heap's Law forestimation and Zipf's law for modeling distribution of terms
4. To understand dictionary compression and posting list compression
5. To introduce the scoring ,tf-idfweighting and vector space model for scoring 6.
- To understand cluster pruning and tiered indices
7. To learn the elements of Web Search basics
8. To learn various language models for information retrieval and their types

Module 1 Introduction to Information Retrieval

Information retrieval problem, an inverted index, Processing Boolean queries ,The extended Boolean model versus ranked retrieval , an inverted index ,Bi-word indexes, Positional indexes, Combination schemes

Module 2 Index construction

Hardware basics, Blocked sort-based indexing ,Single-passin-memory indexing ,Distributed indexing, Dynamic indexing, Other types of indexes

Index compression: Statistical properties of terms in information retrieval ,Heap's law: Estimatingthenumberofterms,Zipf'slaw:Modelingthedistributionofterms,Dictionary compression, Dictionary a string, Blocked storage, Postings file compression.

Module 3 Scoring , term weighting and the vector space model

Parametric and zone indexes ,Weighted zone scoring, Learning weights ,The optimal weight, Term frequency and weighting, Inverse document frequency, Tf-idf weighting, The vector space model for scoring, Variant tf-idffunctions.

Module 4 Computing scores in a complete search system

Efficient scoring and ranking, In exact top K document retrieval, Index elimination ,Champion lists, Static quality scores and ordering ,Impact ordering ,Cluster pruning ,Component so fan information retrieval system, Tiered indexes

Module 5 Web search basics

Background and history, Web characteristics, Theweb graph, Spam, Advertising as the economic model, The search user experience, User query needs
Crawling, Crawler architecture, DNS resolution, The URL frontier, Link analysis, The Web as a graph, Anchor text and the web graph ,Page Rank, Markov chains, The Page Rank computation, Topic-specific Page Rank

Module 6 Language models for information retrieval

Language models, Finite automata and language models, Types of language models, Multinomial distributions over words , The query likelihood model, Using query like lihood language models in IR, Estimating the query generation probability ,Language modeling versus other approaches in IR

Course Outcomes

- a. The students will be able to understand basic Information Retrieval Systems.
- b. The students will be able to lean how Boolean queries are processed.
- c. The students will be able to identify the different types of indices: inverted index, positional index, bi-word index etc
- d. The student will be able to make estimations and model distribution of terms and compressions
- e. The students will be able to enumerate various types of indices. And also understand the concept of efficient storage of indices.
- f. The students will be able to learn tf-idf scoring and vector space model scoring for ranking
- g. The students will be able to understand Static quality ordering , cluster pruning and tiered indices
- h. The students will be able to understand the basic concept of Search Engines their architecture and various functional components.

- i. The students will be able to understand the basic concept of Web crawlers and their architecture
- j. The students will be able to understand various language models related to information retrieval

SUBJECT NAME: WEB TECHNOLOGIES (ELECTIVE II)

NO OF CREDITS: 3

M.TECH SEMESTER I	SESSIONAL:	25
L T P	THEORY EXAM:	75
3 0 0	TOTAL :	100

Pre Requisites :

Course Objectives:

1. To introduce the concept of essentials on web, internet protocols, markup language ,XML and its DOM
2. To make the student familiar with client side & server side programming
3. To make the student familiar with the wireless LAN including Bluetooth technology.
4. To introduce the concept of web services and HTML 5.0.

Module I: Introduction

Web Essentials Clients, Servers, and Communication. The Internet-Basic Internet Protocols -The World Wide Web-HTTP request message-response message-Web Clients, Web Servers, Markup Languages: HTML: list, table, images, frames, forms, CSS.

Module II:XML

Introduction, Role of XML, Difference between XML and HTML, XML Tree, XML Syntax, Elements, Attributes, Validation, XML DTD: Introduction, Using DTD in an XML Document, Element Type Declaration, Attribute Declaration, Entity Declaration, CDATA, DTD validation, XML schemes: presenting and using XML; XML DOM: DOM Nodes, Document Node, Element Node, Text Node, Attribute Node, Manipulating DOM Tree, XML Transformation, XML Application.

Module III:Client Side Programming

Java script: Introduction, variables, operators, Control structure, Arrays, Functions, documents, DOM, forms, statements, functions, objects; events and event handling, Accessing and Manipulating HTML Elements, Data entry and Validations, DHTML

Module IV: Server Side Programming

JSP: Creating simple JSP Pages, templating ,Request time expression,Request& Response objects, Reading parameter values. Java Servlets- Architecture -Overview-A Servlet-Generating Dynamic Content-Life CycleParameter Data-Sessions-Cookies- URL Rewriting-Other Capabilities-Data Storage Servlets and Concurrency

Course Outcomes

Upon successful completion of the course, the student will be:

- a. Able to understand the concept of client server communication over web, Internet protocols, HTTP, and web server.
- b. Able to make a web page using HTML, list, tags, forms, CSS.
- c. Familiar with XML, role of XML, syntax and attributes of XML & to perform client side programming.
- d. Familiar with Server side programming concepts like Java Servlets, cookies,

Course Objectives:

1. Understand research problem formulation.
2. Analyze research related information
3. Follow research ethics
4. Understand that today's world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity.
5. Understanding that when IPR would take such important place in growth of individuals & nation, it is needless to emphasis the need of information about Intellectual Property Right to be promoted among students in general & engineering in particular
6. Understand that IPR protection provides an incentive to inventors for further research work and investment in R & D, which leads to creation of new and better products, and in turn brings about, economic growth and social benefits.

MODULE-1:

Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem, Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations

MODULE-2:

Effective literature studies approaches, analysis Plagiarism, Research ethics

MODULE-3:

Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee

MODULE-4:

Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT

MODULE-5:

Patent Rights: Scope of Patent Rights, Licensing and transfer of technology, Patent information and databases, Geographical Indications

MODULE-6:

New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs

Course Outcomes:

- a. To identify sources of research problem and approaches of investigation for solutions for research problem
- b. To learn various research ethics
- c. To learn the concepts of Patents, procedure for granting patents and administration of patent system

SUBJECT NAME: ADVANCE ALGORITHMS

NO OF CREDITS: 3

M.TECH SEMESTER II	SESSIONAL:	25
L T P	THEORY EXAM:	75
3 0 0	TOTAL :	100

Pre-requisites:UG level course in Algorithm Design and Analysis

Course Objectives:

1. Introduce students to the advanced methods of designing and analyzing algorithms.
2. The student should be able to choose appropriate algorithms and use it for a specific problem.
3. To familiarize students with basic paradigms and data structures used to solve advanced algorithmic problems.
4. Students should be able to understand different classes of problems concerning their computation difficulties.
5. To introduce the students to recent developments in the area of algorithmic design.

MODULE-1:

Sorting: Review of various sorting algorithms, topological sorting

Graph: Definitions and Elementary Algorithms: Shortest path by BFS, shortest path in edge-weighted case (Dijkasra's), depth-first search and computation of strongly connected components, emphasis on correctness proof of the algorithm and time/space analysis, example of amortized analysis.

MODULE-2:

Matroids: Introduction to greedy paradigm, algorithm to compute a maximum weight maximal independent set, Application to MST.

Graph Matching: Algorithm to compute maximum matching. Characterization of maximum matching by augmenting paths, Edmond's Blossom algorithm to compute augmenting path

MODULE-3:

Flow-Networks: Maxflow-mincut theorem, Ford-Fulkerson Method to compute maximum flow, Edmond-Karp maximum-flow algorithm.

Matrix Computations: Strassen's algorithm and introduction to divide and conquer paradigm, inverse of a triangular matrix, relation between the time complexities of basic matrix operations, LUP-decomposition

MODULE-4:

Shortest Path in Graphs: Floyd-Warshall algorithm and introduction to dynamic programming paradigm, More examples of dynamic programming

Modulo Representation of integers/polynomials: Chinese Remainder Theorem, Conversion between base-representation and modulo-representation, Extension to polynomials, Application: Interpolation problem.

Discrete Fourier Transform (DFT): In complex field, DFT in modulo ring. Fast Fourier Transform algorithm, Schonhage-Strassen Integer Multiplication algorithm

MODULE-5:

Linear Programming: Geometry of the feasibility region and Simplex algorithm

NP-completeness: Examples, proof of NP-hardness and NP-completeness.

One or more of the following topics based on time and interest

Approximation algorithms, Randomized Algorithms, Interior Point Method, Advanced Number Theoretic Algorithm

MODULE-6:

Recent Trends in problem solving paradigms using recent searching and sorting techniques by applying recently proposed data structures.

Course Outcomes:

- a. Analyze the complexity/performance of different algorithms.
- b. Determine the appropriate data structure for solving a particular set of problems.
- c. Categorize the different problems in various classes according to their complexity.
- d. Students should have an insight of recent activities in the field of the advanced data structure

CODE: MCS-18-202

SUBJECT NAME: SOFT COMPUTING

NO OF CREDITS: 3

M.TECH SEMESTER II	SESSIONAL:	25
L T P	THEORY EXAM:	75
3 0 0	TOTAL :	100

Pre-requisites:Basic knowledge of mathematics

Course Objectives:

1. To introduce soft computing concepts and techniques and foster their abilities in designing appropriate technique for a given scenario
2. To implement soft computing based solutions for real-world problems
3. To give students knowledge of non-traditional technologies and fundamentals of artificial neural networks, fuzzy sets, fuzzy logic, genetic algorithms
4. To provide studentan hand-on experience on MATLAB to implement various strategies

MODULE-1: INTRODUCTION TO SOFT COMPUTING AND NEURAL NETWORKS

Evolution of Computing: Soft Computing Constituents, From Conventional AI to Computational Intelligence: Machine Learning Basics

MODULE-2: FUZZY LOGIC

Fuzzy Sets, Operations on Fuzzy Sets, Fuzzy Relations, Membership Functions: Fuzzy Rules and Fuzzy Reasoning, Fuzzy Inference Systems, Fuzzy Expert Systems, Fuzzy Decision Making

MODULE-3: NEURAL NETWORKS

Machine Learning Using Neural Network, Adaptive Networks, Feed forward Networks, Supervised Learning Neural Networks, Radial Basis Function Networks : Reinforcement Learning, Unsupervised Learning Neural Networks, Adaptive Resonance architectures, Advances in Neural networks

MODULE-4: GENETIC ALGORITHMS

Introduction to Genetic Algorithms (GA), Applications of GA in Machine Learning: Machine Learning Approach to Knowledge Acquisition

MODULE-5: MATLAB/PYTHON LIB

Introduction to Matlab/Python, Arrays and array operations, Functions and Files, Study of neural network toolbox and fuzzy logic toolbox, Simple implementation of Artificial Neural Network and Fuzzy Logic

MODULE-6:

Recent Trends in deep learning, various classifiers, neural networks and genetic algorithm, Implementation of recently proposed soft computing techniques

Course Outcomes:

- a. Identify and describe soft computing techniques and their roles in building intelligent machines
- b. Apply fuzzy logic and reasoning to handle uncertainty and solve various engineering problems.
- c. Apply genetic algorithms to combinatorial optimization problems.
- d. Evaluate and compare solutions by various soft computing approaches for a given problem.

CODE: MCS-18-206

SUBJECT NAME: Big Data Analytics (ELECTIVE III)

NO OF CREDITS: 3

M.TECH SEMESTER II	SESSIONAL:	25
L T P	THEORY EXAM:	75
3 0 0	TOTAL :	100

Pre-requisites:Data Structure, Computer Architecture and Organization

Course Objectives:

1. Understand big data for business intelligence. Learn business case studies for big data analytics.
2. Understand nosql big data management. Perform map-reduce analytics using Hadoop and related tools

MODULE-1:

What is big data, why big data, convergence of key trends, unstructured data, industry examples of big data, web analytics, big data and marketing, fraud and bigdata, risk and big data, credit risk management, big data and algorithmic trading, big data and healthcare, big data in medicine, advertising and big data, big datatechnologies, introduction to Hadoop, open source technologies, cloud and bigdata, mobile business intelligence, Crowd sourcing analytics, inter and transfirewall analytics.

MODULE-2:

Introduction to NoSQL, aggregate data models, aggregates, key-value and document data models, relationships, graph databases, schemaless databases, materialized views, distribution models, sharding, master-slave replication, peer-peer replication, sharding and replication, consistency, relaxing consistency, version stamps, map-reduce, partitioning and combining, composing map-reduce calculations.

MODULE-3:

Data format, analyzing data with Hadoop, scaling out, Hadoop streaming, Hadoop pipes, design of Hadoop distributed file system (HDFS), HDFS concepts, Java interface, data flow, Hadoop I/O, data integrity, compression, serialization, Avro, file-based data structures.

MODULE-4:

MapReduce workflows, unit tests with MRUnit, test data and local tests, anatomy of MapReduce job run, classic Map-reduce, YARN, failures in classic Map-reduce and YARN, job scheduling, shuffle and sort, task execution, MapReduce types, input formats, output formats.

MODULE-5:

Hbase, data model and implementations, Hbase clients, Hbaseexamples,praxis.Cassandra, Cassandra data model, Cassandra examples, Cassandra clients,Hadoop integration.

MODULE-6:

Pig, Grunt, pig data model, Pig Latin, developing and testing Pig Latin scripts.Hive, data types and file formats, HiveQL data definition, HiveQL data manipulation,HiveQL queries.

Course Outcomes:

After completion of course, students would be able to:

- a. Describe big data and use cases from selected business domains.
- b. Explain NoSQL big data management.
- c. Install, configure, and run Hadoop and HDFS.
- d. Perform map-reduce analytics using Hadoop.
- e. Use Hadoop related tools such as HBase, Cassandra, Pig, and Hive for big data analytics

CODE: MCS-18-207

SUBJECT NAME: Secure Software Design & Enterprise Computing (ELECTIVE III)

NO OF CREDITS: 3

M.TECH SEMESTER II

SESSIONAL: 25

L T P

THEORY EXAM: 75

3 0 0

TOTAL : 100

Pre-requisites:Computer Programming, Software Engineering

Course Objectives:

1. To fix software flaws and bugs in various software.
2. To make students aware of various issues like weak random number generation, information leakage, poor usability, and weak or no encryption on data traffic.
3. Techniques for successfully implementing and supporting network services on an enterprise scale and heterogeneous systems environment.
4. Methodologies and tools to design and develop secure software containing minimum vulnerabilities and flaws.

MODULE-1: Secure Software Design

Identify software vulnerabilities and perform software security analysis, Master security programming practices, Master fundamental software security design concepts, Perform security testing and quality assurance.

MODULE-2: Enterprise Application Development

Describe the nature and scope of enterprise software applications, Design distributed N-tier software application, Research technologies available for the presentation, business and data tiers of an enterprise software application, Design and build a database using an enterprise database system, Develop components at the different tiers in an enterprise system, Design and develop a multi-tier solution to a problem using technologies used in enterprise system, Present software solution.

MODULE-3: Enterprise Systems Administration

Design, implement and maintain a directory-based server infrastructure in a heterogeneous systems environment, Monitor server resource utilization for system reliability and availability, Install and administer network services (DNS/DHCP/Terminal Services/Clustering/Web/Email).

MODULE-4:

Obtain the ability to manage and troubleshoot a network running multipleservices, Understand the requirements of an enterprise network and how to goabout managing them.

MODULE-5:

Handle insecure exceptions and command/SQL injection, Defend web andmobile applications against attackers, software containing minimumvulnerabilities and flaws.

MODULE-6:

Case study of DNS server, DHCP configuration and SQL injection attack.

Course Outcomes:

After completion of course, students would be able to:

- a. Differentiate between various software vulnerabilities.
- b. Software process vulnerabilities for an organization.
- c. Monitor resources consumption in a software.
- d. Interrelate security and software development process.

SUBJECT NAME: Network Security (ELECTIVE III)

NO OF CREDITS: 3

M.TECH SEMESTER I

L T P

3 0 0

SESSIONAL: 25

THEORY EXAM: 75

TOTAL : 100

Pre Requisites

Course Objectives

1. Understand the basic concept of Cryptography and Network Security, their mathematical models.
2. To understand various types of ciphers, message Authentication, digital Signature System and to impart knowledge of major issues in network and computer system security, focusing mainly on threats from malicious software.
3. To study various issues in security of MANETS and study various attacks.
4. To provide the students with the competences required for understanding various issues in security of Wireless Security Networks and also various attacks against security mechanism and routing.

Unit 1 : Introduction

What is security?, Need of security, Why is security so hard?, various goals of security, Difference between Vulnerability, Threats, Attacks and control, Security goals, aspects of security, security services, security attacks,

Encryption Techniques: Terminology of encryption, Requirement of encryption, cryptography, cryptanalysis, cryptanalytic attacks, symmetric ciphers: Substitution ciphers, Transposition ciphers, Data Encryption Standard (DES, Advanced Encryption Standard (AES), location of encryption devices, key distribution, Public Key Cryptography and RSA, Diffie-Hellman Key Exchange, Message Authentication and Hash Functions, MD5, SHA

Unit 2 : Network Security

Security services, Message confidentiality, Message integrity, message authentication, digital signature, entity authentication. **Authentication applications:** Kerberos 95, X.509 Authentication service, Public key infrastructure. **Electronic mail Security:** Pretty Good Privacy (PGP), **IP Security:** IP security overview, IP security architecture, Authentication header, Encapsulating security Payload, Combining security associations, Key management.

Unit 3 : Security Attacks in MANET

Security issues in MANET, Attacks in MANET: External Attack, Internal attack, Black hole attack, warm hole attack, grey hole attack, Byzantine attack, Sleep Deprivation attack, Flooding attack: RREQ flooding attack, Data flooding Attack.

UNIT 4 : Security Attacks in Wireless Sensor Networks

Security issues in WSN, Attacks in WSN : Attack against Security mechanism, Attack against basic mechanism like routing: Spoofed, altered, or replayed routing , Information , Selective forwarding , Sinkhole attacks , Sybil attacks , Wormholes, HELLO flood attacks

Course Outcomes

After the completion of this course the student will able to:

- a. Understand theory of fundamental cryptography, encryption and decryption algorithms and have a detailed knowledge about authentication, hash functions and application level security mechanisms.
- b. To be familiar with network security designs using available secure solutions and advanced security issues and technologies
- c. To develop basic security enhancements in MANETS
- d. To know how authentication is implemented in wireless systems and understand authentication protocols and processes.

CODE: MCS-18-209

**SUBJECT NAME: Software Testing (ELECTIVE III)
NO OF CREDITS: 3**

M.TECH SEMESTER II

SESSIONAL: 25

L T P

THEORY EXAM: 75

3 0 0

TOTAL : 100

Pre-requisites:

Course Objectives

1. To get familiar the students about basic concepts of software testing and its techniques.
2. To study the concepts of Verification and validation activities.
3. To study in detail the process of performing the black box and white box testing approaches with examples.
4. To get familiar the students with the concept of regression testing, various testing automation and debugging tools and case studies.
5. To study the basic and advanced concepts of object oriented testing

MODULE-1: Testing terminology and Methodology

Definition of testing, goals, psychology ,model for testing, effective testing, limitations of testing, Importance of Testing, Definition of Failure, faults or bug, error, incident, test case, test ware, life cycle of bug, bug effects, bug classification, test case design, testing methodology, development of test strategy, verification, validation, Static testing: Inspection, Review and Walk through, dynamic testing ,testing life cycle model, testing techniques, testing principles, Testing Metrics.

MODULE -2: Verification and validation

Verification activities, verification of requirements, verification of HL design, verification of data design, verification of architectural design, verification of UI design, verification of LL design, introduction to validation activities

MODULE -3: Dynamic testing

White Box testing: Boundary value analysis, equivalence class partitioning, state table based testing, decision table based, error guessing.

Black Box Testing: Logic coverage criteria, basic path testing, graph matrices.

MODULE -4: Validation Testing

Unit testing, drivers, stubs, integration testing, methods, functional testing, system testing, recovery testing, security testing, stress testing, performance testing, usability testing

MODULE -5: Regression Testing

Objectives of regression testing, Regression test process, Regression testing techniques.

MODULE -6: Test Automation and debugging

Software measurement and testing, testing metrics and tools.

Case Study: Testing for Object-oriented and web-based systems

MODULE -7: Object-Oriented Testing

Use-case based testing; Class testing, Testing Exception handling

Course Outcomes:

- a. The students will be able to understand the concepts of software testing, its techniques, verification and validation activities.
- b. Study of black box, white box testing, regression testing and its techniques.
- c. Study of object oriented testing techniques and testing metrics.
- d. Study of case studies and various testing automation and debugging tools.

CODE: MCS-18-211

SUBJECT NAME: Wireless Sensor Networks (ELECTIVE IV)

NO OF CREDITS: 3

M.TECH SEMESTER II

SESSIONAL: 25

L T P

THEORY EXAM: 75

3 0 0

TOTAL : 100

Pre-requisites: Wireless Communication

Course Objectives:

1. Architect sensor networks for various application setups.
2. Devise appropriate data dissemination protocols and model links cost.
3. Understanding of the fundamental concepts of wireless sensor networks and have a basic knowledge of the various protocols at various layers.
4. Evaluate the performance of sensor networks and identify bottlenecks.

MODULE-1:

Introduction to Wireless Sensor Networks: Course Information, Introduction to Wireless Sensor Networks: Motivations, Applications, Performance metrics, History and Design factors.

Network Architecture: Traditional layered stack, Cross-layer designs, Sensor Network Architecture.

Hardware Platforms: Motes, Hardware parameters.

MODULE-2:

Introduction to ns-3: Introduction to Network Simulator 3 (ns-3), Description of the ns-3 core module and simulation example.

MODULE-3:

Medium Access Control Protocol design: Fixed Access, Random Access, WSN protocols: synchronized, duty-cycled.

Introduction to Markov Chain: Discrete time Markov Chain definition, properties, classification and analysis

MAC Protocol Analysis: Asynchronous duty-cycled. X-MAC Analysis (Markov Chain).

MODULE-4:

Security: Possible attacks, countermeasures, SPINS, Static and dynamic key distribution.

MODULE-5:

Routing protocols: Introduction, MANET protocols

Routing protocols for WSN: Resource-aware routing, Data-centric, Geographic Routing, Broadcast, Multicast

Opportunistic Routing Analysis: Analysis of opportunistic routing (MarkovChain) Advanced topics in wireless sensor networks.

MODULE-6:

ADVANCED TOPICS

Recent development in WSN standards, software applications.

Course Outcomes:

After completion of course, students would be able to:

- a. Describe and explain radio standards and communication protocols for wireless sensor networks.
- b. Explain the function of the node architecture and use of sensors for various applications.
- c. Be familiar with architectures, functions and performance of wireless sensor networks systems and platforms.

SUBJECT NAME: Advanced Wireless and Mobile Networks (ELECTIVE IV)

NO OF CREDITS: 3

M.TECH SEMESTER II

SESSIONAL: 25

L T P

THEORY EXAM: 75

3 0 0

TOTAL : 100

Pre-requisites:Computer Networks

Course Objectives:

1. The students should get familiar with the wireless/mobile market and the future needs and challenges.
2. To get familiar with key concepts of wireless networks, standards, technologies and their basic operations.
3. To learn how to evaluate MAC and network protocols using network simulation software tools.
4. The students should get familiar with the wireless/mobile market and the future needs and challenges.

MODULE-1:

INTRODUCTION:

Wireless Networking Trends, Key Wireless Physical Layer Concepts, Multiple Access Technologies -CDMA, FDMA, TDMA, Spread Spectrum technologies, Frequency reuse, Radio Propagation and Modelling, Challenges in Mobile Computing: Resource poorness, Bandwidth, energy etc.

WIRELESS LOCAL AREA NETWORKS:

IEEE 802.11 Wireless LANs Physical & MAC layer, 802.11 MAC Modes (DCF& PCF) IEEE 802.11 standards, Architecture & protocols, Infrastructure vs. Adhoc Modes, Hidden Node & Exposed Terminal Problem, Problems, Fading Effects in Indoor and outdoor WLANs, WLAN Deployment issues.

MODULE-2:

WIRELESS CELLULAR NETWORKS:

1G and 2G, 2.5G, 3G, and 4G, Mobile IPv4, Mobile IPv6, TCP over Wireless Networks, Cellular architecture, Frequency reuse, Channel assignment strategies, Handoff strategies, Interference and system capacity, Improving coverage and capacity in cellular systems, Spread spectrum Technologies.

MODULE-3:

WiMAX (Physical layer, Media access control, Mobility and Networking), IEEE802.22 Wireless Regional Area Networks, IEEE 802.21 Media Independent Handover Overview .

WIRELESS SENSOR NETWORKS

Introduction, Application, Physical, MAC layer and Network Layer, Power Management, Tiny OS Overview.

MODULE-4:

WIRELESS PANs

Bluetooth AND Zigbee, Introduction to Wireless Sensors.

MODULE-5:

SECURITY

Security in wireless Networks Vulnerabilities, Security techniques, Wi-Fi Security, DoS in wireless communication.

MODULE-6:

ADVANCED TOPICS

IEEE 802.11x and IEEE 802.11i standards, Introduction to Vehicular Adhoc Networks.

Course Outcomes:

After completion of course, students would be able to:

- a. Demonstrate advanced knowledge of networking and wireless networking and understand various types of wireless networks, standards, operations and use cases.
- b. Be able to design WLAN, WPAN, WWAN, Cellular based upon underlying propagation and performance analysis.
- c. Demonstrate knowledge of protocols used in wireless networks and learn simulating wireless networks.
- d. Design wireless networks exploring trade-offs between wire line and wireless links.
- e. Develop mobile applications to solve some of the real world problems.

CODE: MCS-18-213

SUBJECT NAME: Natural Language Processing (ELECTIVE V)

NO OF CREDITS: 3

M.TECH SEMESTER II

SESSIONAL: 25

L T P

THEORY EXAM: 75

3 0 0

TOTAL : 100

Pre-requisites:

Course Objectives

1. To introduce the students difference levels/ stages of natural language processing/understanding and their applications and concept of Formal languages and grammars such Chomsky hierarchy and problems associated with them.
2. To introduce the top down and the bottom up parsing techniques such as CKY, Earley& Tomita's
3. To introduce the Finite state models and morphology of natural languages.
4. To make the students familiar with Semantics-knowledge and strategies for semantic understanding.
5. To make the students familiar with speech recognition and issues associated with it. And solving problems using HMM and Python language

MODULE-1: Introduction to NLP and Grammars

Applications of NLP &NLU, open problem, Differences levels of Language Analysis and Ambiguities, Introduction of different classes of grammar such Chomsky hierarchy, LFG, GPSG, HPSG, TAG, GB Theory.

MODULE -2: Syntactic Processing

Linguistic Background –Outline of English and Hindi Syntax, Basic Top down &Bottom up parsers: CKY, Earley& Tomita's, Finite state models and morphological processing, Syntactic processing using RTN &ATN,

MODULE -3: Semantic Introduction

Semantic and logical form, Ambiguity, speech acts and embedded Sentences, other strategies for Semantic Interpretation.

MODULE -4: Speech Recognition and Spoken language

Issues in Speech Recognition, sound structure, Signal processing, HMM model, NLP using Python language, NLU and speech Recognition.

Course Outcomes:

After successful completion of the course student will be able to:

- a. Understand the difference levels/ stages and applications of natural language processing/understanding and know and apply the concept of Formal languages and grammars: such as Chomsky hierarchy and problems associated with them.
- b. Perform, computationally, top down and the bottom up parsing like CKY, Earley& Tomita's
- c, Develop finite state and morphological models for language processing.
- d. PerformSemantics-Analysis using suitable approach.
- e. Understand the issues associated with speech recognition and solve Speech and Language Processing problems using HMM and Python language.

CODE: MCSE-18-302

SUBJECT NAME: Advanced Information Retrieval Systems (ELECTIVE V)

NO OF CREDITS: 3

M.TECH SEM ESTER III	SESSIONAL:	25
L T P	THEORY EXAM:	75
3 0 0	TOTAL :	100

Course Objectives :

1. To build an understanding of the fundamental concepts of Information Retrieval, the basic taxonomy of Indices, laws for estimation and modeling distribution of terms
2. To understand definition of Search, Integration & Web Data Mining
3. To introduce the concept of Semantic Web and related problems and its presentation schemes like RDF.
4. To learn the basics Information retrieval approaches and Technologies
5. To learn Semantic Web Search Engine, Query Processing and Indexing

MODULE-1: Introduction to Advanced Information Retrieval System Information retrieval problem, an inverted index, Processing Boolean queries, The extended Boolean model versus ranked retrieval, Basic Index Construction & Index Compression- an inverted index, Bi-word indexes, Positional indexes, Combination schemes, Heaps Law & Zipf's law, Advanced Indexing & Retrieval Schemes, Better Link Analysis for ranking, Advantages of Advanced IRS over Basic IRS

MODULE-2: The World Of Semantic Web Introduction to WWW and definition of Search, Integration & Web Data Mining. Semantic Web and Introduction to metadata, its basic concepts and considerations. Search Engines for traditional web: Building the index table, conducting the search, Search Engines for Semantic Web: Building a semantic Web Search Engines, Using the Semantic Web Search Engines Problems related to Semantic Web Search Engines

MODULE-3: The Basic Elements Of Semantic Web Building block of Semantic Web: RDF, Overview of RDF, Basic elements of RDF, RDF Triples, Basic syntax, literal values and other RDF capabilities. Fundamental rules of RDF, Aggregation & Distributed Information RDFS, Taxonomy and Ontology, Core Elements of RDFS, Syntax & Examples, Concepts of Ontology & Taxonomy.

MODULE-4: The Semantic Web: Real –World Examples Swoogle: A Search Engine for Semantic Web documents: Swoogle Architecture, Discovery of SWDs, Collection of Metadata and calculation of rankings using metadata. Indexation and retrieval of SWDs FOAF: Friend of a Friend, Basic FOAF Vocabulary & Examples. Creating a FOAF Document and getting into the Circle. Semantic Markup, Semantic Markup issues.

MODULE-5: Semantic Web Search Engines Revisited: Why Search Engines Again? Why traditional Search /engines fails? The Design of Semantic Web Search Engine prototype: Query processing, Discovery Strategy, Indexation Strategy, Using the prototype system. Why this prototype Search Engine provides better performance.

Course Outcomes:

After successful completion of the course, the students will be able to:

1. Understanding of the fundamental concepts of Information Retrieval, the basic taxonomy of Indices, laws for estimation and modeling distribution of terms.
2. Understand definition of Search, Integration & Web Data Mining and architectures of search engines and their query processing mechanism.
3. Comprehend the concept of Semantic Web and related problems and its presentation schemes like RDF and RDFS etc.
4. Learn the basics Information retrieval approaches and Technologies such Swoogle
5. To learn Semantic Web Search Engine, Query Processing and Indexing

CODE: MCS-18-303

SUBJECT NAME: Optimization Techniques (ELECTIVE V)

NO OF CREDITS: 3

M.TECH SEMESTER III

SESSIONAL: 25

L T P

THEORY EXAM: 75

3 0 0

TOTAL : 100

Pre-requisites:

Course Objectives:

1. The objective of this course is to provide insight to the mathematical formulation of real world problems.
2. To optimize these mathematical problems using nature based algorithms. And the solution is useful specially for NP-Hard problems.

MODULE-1:

Engineering application of Optimization, Formulation of design problems as mathematical programming problems.

MODULE-2:

General Structure of Optimization Algorithms, Constraints, The Feasible Region.

MODULE-3:

Branches of Mathematical Programming: Optimization using calculus, Graphical Optimization, Linear Programming, Quadratic Programming, Integer Programming, Semi Definite Programming.

MODULE-4:

Optimization Algorithms like Genetic Optimization, Particle Swarm Optimization, Ant Colony Optimization etc.

MODULE-5:

Real life Problems and their mathematical formulation as standard programming problems

MODULE-6:

Recent trends: Applications of ant colony optimization, genetics and linear and quadratic programming in real world applications.

Course Outcomes:

After completion of course, students would be able to:

- a. Formulate optimization problems.
- b. Understand and apply the concept of optimality criteria for various types of optimization problems.
- c. Solve various constrained and unconstrained problems in Single variable as well as multivariable.
- d. Apply the methods of optimization in real life situation.

CODE: MCS-18-304

SUBJECT NAME: Cloud Computing (ELECTIVE V)

NO OF CREDITS: 3

M.TECH SEMESTER III

SESSIONAL: 25

L T P

THEORY EXAM: 75

3 0 0

TOTAL : 100

Pre-requisites: Computer Networks

Course Objectives:

1. The student will also learn how to apply trust-based security model to real-world security problems.
2. An overview of the concepts, processes, and best practices needed to successfully secure information within Cloud infrastructures.
3. Students will learn the basic Cloud types and delivery models and develop an understanding of the risk and compliance responsibilities and Challenges for each Cloudtype and service delivery model.

MODULE-1:

Introduction to Cloud Computing

Online Social Networks and Applications, Cloud introduction and overview, Different clouds, Risks, Novel applications of cloud computing.

MODULE-2:

Cloud Computing Architecture

Requirements, Introduction Cloud computing architecture, On Demand Computing Virtualization at the infrastructure level, Security in Cloud computing environments, CPU Virtualization, A discussion on Hypervisors Storage Virtualization Cloud Computing Defined, The SPI Framework for Cloud Computing, The Traditional Software Model, The Cloud Services Delivery Model.

Cloud Deployment Models

Key Drivers to Adopting the Cloud, The Impact of Cloud Computing on Users, Governance in the Cloud, Barriers to Cloud Computing Adoption in the Enterprise.

MODULE-3:

Security Issues in Cloud Computing

Infrastructure Security, Infrastructure Security: The Network Level, The Host Level, The Application Level, Data Security and Storage, Aspects of Data Security, Data Security Mitigation Provider Data and Its Security.

Identity and Access Management

Trust Boundaries and IAM, IAM Challenges, Relevant IAM Standards and Protocols for Cloud Services, IAM Practices in the Cloud, Cloud Authorization Management.

MODULE-4:

Security Management in the Cloud

Security Management Standards, Security Management in the Cloud, Availability Management: SaaS, PaaS, IaaS

Privacy Issues

Privacy Issues, Data Life Cycle, Key Privacy Concerns in the Cloud, Protecting Privacy, Changes to Privacy Risk Management and Compliance in Relation to Cloud Computing, Legal and Regulatory Implications, U.S. Laws and Regulations, International Laws and Regulations.

MODULE-5:

Audit and Compliance

Internal Policy Compliance, Governance, Risk, and Compliance (GRC), Regulatory/External Compliance, Cloud Security Alliance, Auditing the Cloud for Compliance, Security-as-a-Cloud.

MODULE-6:

ADVANCED TOPICS

Recent developments in hybrid cloud and cloud security.

Course Outcomes:

After completion of course, students would be able to:

- a. Identify security aspects of each cloud model
- b. Develop a risk-management strategy for moving to the Cloud
- c. Implement a public cloud instance using a public cloud service provider
- d. Apply trust-based security model to different layer

CODE: OEC-101A

SUBJECT NAME: Business Analytics (OPEN ELECTIVE)

NO OF CREDITS: 3

M.TECH SEMESTER III

SESSIONAL: 25

L T P

THEORY EXAM: 75

3 0 0

TOTAL : 100

Pre-requisites:Computer Networks

Course Objectives:

1. Understand the role of business analytics within an organization.
2. Analyze data using statistical and data mining techniques and understand relationships between the underlying business processes of an organization.
3. To gain an understanding of how managers use business analytics to formulate and solve business problems and to support managerial decision making.
4. To become familiar with processes needed to develop, report, and analyze business data.
5. Use decision-making tools/Operations research techniques.
6. Manage business process using analytical and management tools.
7. Analyze and solve problems from different industries such as manufacturing, service, retail, software, banking and finance, sports, pharmaceutical, aerospace etc.

MODULE-1:

Business analytics: Overview of Business analytics, Scope of Business analytics, Business Analytics Process, Relationship of Business Analytics Process and organisation, competitive advantages of Business Analytics.

Statistical Tools: Statistical Notation, Descriptive Statistical methods, Review of probability distribution and data modelling, sampling and estimation methods overview.

MODULE-2:

Trendiness and Regression Analysis: Modelling Relationships and Trends in Data, simple Linear Regression.

Important Resources, Business Analytics Personnel, Data and models for Business analytics, problem solving, Visualizing and Exploring Data, Business Analytics Technology.

MODULE-3:

Organization Structures of Business analytics, Team management, Management Issues, Designing Information Policy, Outsourcing, Ensuring Data Quality, Measuring contribution of Business analytics, Managing Changes.

Descriptive Analytics, predictive analytics, predicative Modelling, Predictiveanalytics analysis, Data Mining, Data Mining Methodologies, Prescriptiveanalytics and its step in the business analytics Process, PrescriptiveModelling, nonlinear Optimization.

MODULE-4:

Forecasting Techniques: Qualitative and Judgmental Forecasting, StatisticalForecasting Models, Forecasting Models for Stationary Time Series,Forecasting Models for Time Series with a Linear Trend, Forecasting TimeSeries with Seasonality, Regression Forecasting with Casual Variables,Selecting Appropriate Forecasting Models.

Monte Carlo Simulation and Risk Analysis: Monte Carle Simulation UsingAnalytic Solver Platform, New-Product Development Model, NewsvendorModel, Overbooking Model, Cash Budget Model.

MODULE-5:

Decision Analysis: Formulating Decision Problems, Decision Strategies withthe without Outcome Probabilities, Decision Trees, The Value ofInformation, Utility and Decision Making.

MODULE-6:

Recent Trends in : Embedded and collaborative business intelligence, Visualdata recovery, Data Storytelling and Data journalism.

Course Outcomes:

After completion of course, students would be able to:

- a. Students will demonstrate knowledge of data analytics.
- b. Students will demonstrate the ability of think critically in making decisions based on dataand deep analytics.
- c. Students will demonstrate the ability to use technical skills in predicative and prescriptivemodeling to support business decision-making.
- d. Students will demonstrate the ability to translate data into clear, actionable insights.

2. Business Analytics by James Evans, persons Education.

CODE: OEC-102A

SUBJECT NAME: Industrial Safety (OPEN ELECTIVE)

NO OF CREDITS: 3

M.TECH SEMESTER III

SESSIONAL: 25

L T P

THEORY EXAM: 75

3 0 0

TOTAL : 100

Pre-requisites:

Course Objectives:

MODULE-1:

Industrial safety: Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and firefighting, equipment and methods.

MODULE-2:

Fundamentals of maintenance engineering: Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment.

MODULE-3:

Wear and Corrosion and their prevention: Wear- types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.

MODULE-4:

Fault tracing: Fault tracing-concept and importance, decision tree concept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment's like, I. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler, vi. Electrical motors, Types of faults in machine tools and their general causes.

MODULE-5:

Periodic and preventive maintenance: Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: I. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance.

Course Outcomes:

REFERENCES

1. Maintenance Engineering Handbook, Higgins & Morrow, Da Information Services.
2. Maintenance Engineering, H. P. Garg, S. Chand and Company.
3. Pump-hydraulic Compressors, Audels, Mcgrew Hill Publication
4. Foundation Engineering Handbook, Winterkorn, Hans, Chapman & Hall L

CODE: OEC-103A

SUBJECT NAME: Operations Research (OPEN ELECTIVE)

NO OF CREDITS: 3

M.TECH SEMESTER III

SESSIONAL: 25

L T P

THEORY EXAM: 75

3 0 0

TOTAL : 100

Pre-requisites:

Course Objectives:

MODULE-1:

Optimization Techniques, Model Formulation, models, General L.R Formulation, Simplex Techniques, Sensitivity Analysis, Inventory Control Models

MODULE-2:

Formulation of a LPP - Graphical solution revised simplex method - duality theory - dual simplex method - sensitivity analysis - parametric programming.

MODULE-3:

Nonlinear programming problem - Kuhn-Tucker conditions min cost flow problem - max flow problem - CPM/PERT

MODULE-4:

Scheduling and sequencing - single server and multiple server models - deterministic inventory models - Probabilistic inventory control models - Geometric Programming.

MODULE-5:

Competitive Models, Single and Multi-channel Problems, Sequencing Models, Dynamic Programming, Flow in Networks, Elementary Graph Theory, Game Theory Simulation

Course Outcomes:

After completion of course, students would be able to:

- a. Students should be able to apply dynamic programming to solve problems of discrete and continuous variables.
- b. Students should be able to apply the concept of non-linear programming.
- c. Students should be able to carry out sensitivity analysis.
- d. Student should be able to model the real world problem and simulate it.

CODE: OEC-104A

SUBJECT NAME: Cost Management of Engineering Projects (OPEN ELECTIVE)

NO OF CREDITS: 3

M.TECH SEMESTER III

SESSIONAL: 25

L T P

THEORY EXAM: 75

3 0 0

TOTAL : 100

Pre-requisites:

Course Objectives:

MODULE-1:

Introduction and Overview of the Strategic Cost Management Process

MODULE-2:

Cost concepts in decision-making; Relevant cost, Differential cost, Incremental cost and Opportunity cost. Objectives of a Costing System; Inventory valuation; Creation of a Database for operational control; Provision of data for Decision-Making.

MODULE-3:

Project: meaning, Different types, why to manage, cost overruns centres, various stages of project execution: conception to commissioning. Project execution as conglomeration of technical and nontechnical activities. Detailed Engineering activities. Pre project execution main clearances and documents Project team: Role of each member. Importance Project site: Data required with significance. Project contracts. Types and contents. Project execution Project cost control. Bar charts and Network diagram. Project commissioning: mechanical and process.

MODULE-4:

Cost Behavior and Profit Planning Marginal Costing; Distinction between Marginal Costing and Absorption Costing; Break-even Analysis, Cost-Volume-Profit Analysis. Various decision-making problems. Standard Costing and Variance Analysis. Pricing strategies: Pareto Analysis. Target costing, Life Cycle Costing. Costing of service sector. Just-in-time approach, Material Requirement Planning, Enterprise Resource Planning, Total Quality Management and Theory of constraints. Activity-Based Cost Management, Bench Marking; Balanced Score Card and Value-Chain Analysis. Budgetary Control; Flexible Budgets; Performance budgets; Zero-based budgets. Measurement of Divisional profitability pricing decisions including transfer pricing.

MODULE-5:

Quantitative techniques for cost management, Linear Programming, PERT/CPM, Transportation problems, Assignment problems, Simulation, Learning Curve Theory.

Course Outcomes:

CODE: OEC-105A

SUBJECT NAME: Composite Materials (OPEN ELECTIVE)

NO OF CREDITS: 3

M.TECH SEMESTER III

SESSIONAL: 25

L T P

THEORY EXAM: 75

3 0 0

TOTAL : 100

Pre-requisites:

Course Objectives:

MODULE-1: Introduction

Definition – Classification and characteristics of Composite materials. Advantages and application of composites. Functional requirements of reinforcement and matrix. Effect of reinforcement (size, shape, distribution, volume fraction) on overall composite performance.

MODULE-2: Reinforcements

Preparation-layup, curing, properties and applications of glass fibers, carbon fibers, Kevlar fibers and Boron fibers. Properties and applications of whiskers, particulate reinforcements. Mechanical Behavior of composites: Rule of mixtures, Inverse rule of mixtures. Isostrain and Isostress conditions.

MODULE-3: Manufacturing of Metal Matrix Composites

Casting – Solid State diffusion technique, Cladding – Hot isostatic pressing. Properties and applications. Manufacturing of Ceramic Matrix Composites: Liquid Metal Infiltration – Liquid phase sintering. Manufacturing of Carbon – Carbon composites: Knitting, Braiding, Weaving. Properties and applications.

MODULE-4: Manufacturing of Polymer Matrix Composites

Preparation of Moulding compounds and prepregs – hand layup method – Autoclave method – Filament winding method – Compression moulding – Reaction injection moulding. Properties and applications.

MODULE-5: Strength

Laminar Failure Criteria-strength ratio, maximum stress criteria, maximum strain criteria, interacting failure criteria, hygrothermal failure. Laminate first ply failure-insight strength;

Laminate strength-ply discount truncated maximum strain criterion; strength design using caplet plots; stress concentrations.

Course Outcomes:

TEXT BOOKS:

1. Material Science and Technology – Vol 13 – Composites by R.W.Cahn – VCH, WestGermany.
2. Materials Science and Engineering, An introduction. WD Callister, Jr., Adapted by R.Balasubramaniam, John Wiley & Sons, NY, Indian edition, 2007.

REFERENCES

1. Hand Book of Composite Materials-ed-Lubin.
2. Composite Materials – K.K.Chawla.
3. Composite Materials Science and Applications – Deborah D.L. Chung.
4. Composite Materials Design and Applications – Danial Gay, Suong V. Hoa, and Stephen W.Tasi.

CODE:OEC-106A

SUBJECT NAME: Waste to Energy (OPEN ELECTIVE)

NO OF CREDITS:

M.TECH SEMESTER III	SESSIONAL:	25
L T P	THEORY EXAM:	75
3 0 0	TOTAL :	100

Pre-requisites:

Course Objectives:

MODULE-1: Introduction to Energy from Waste

Waste: Classification of waste as fuel – Agro based, Forest residue, Industrial waste - MSW – Conversion devices – Incinerators, gasifiers, digestors.

MODULE-2: Biomass Pyrolysis

Pyrolysis – Types, slow fast – Manufacture of charcoal – Methods – Yields and application – Manufacture of pyrolytic oils and gases, yields and applications

MODULE-3: Biomass Gasification

Gasifiers – Fixed bed system – Downdraft and updraft gasifiers – Fluidized bed gasifiers – Design, construction and operation – Gasifier burner arrangement for thermal heating – Gasifier engine arrangement and electrical power – Equilibrium and kinetic consideration in gasifier operation.

MODULE-4: Biomass Combustion

Biomass stoves – Improved chullahs, types, some exotic designs, Fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design, construction and operation - Operation of all the above biomass combustors.

MODULE-5: Biogas

Biogas: Properties of biogas (Calorific value and composition) - Biogas plant technology and status - Bio energy system - Design and constructional features - Biomass resources and their classification - Biomass conversion processes - Thermo chemical conversion – Direct combustion - biomass gasification - pyrolysis and liquefaction - biochemical conversion - anaerobic digestion – Types of biogas Plants – Applications - Alcohol production from biomass - Bio diesel production - Urban waste to energy conversion - Biomass energy programme in India

Course Outcomes:

REFERENCES

1. Non Conventional Energy, Desai, Ashok V., Wiley Eastern Ltd., 1990.
2. Biogas Technology - A Practical Hand Book - Khandelwal, K. C. and Mahdi, S. S., Vol. I & II, TataMcGraw Hill Publishing Co. Ltd., 1983.
3. Food, Feed and Fuel from Biomass, Challal, D. S., IBH Publishing Co. Pvt. Ltd., 1991.
4. Biomass Conversion and Technology, C. Y. WereKo-Brobby and E. B. Hagan, John Wiley & Sons, 1996.

Audit Courses I & II

CODE: AUD-01A

SUBJECT NAME: English for Research Paper Writing

NO OF CREDITS:

M.TECH SEMESTER IV

SESSIONAL: 25

L T P

THEORY EXAM: 75

3 0 0

TOTAL : 100

Pre-requisites:

Course Objectives:

Students will be able to:

1. Understand that how to improve your writing skills and level of readability.
2. Learn about what to write in each section.
3. Understand the skills needed when writing a Title.

Ensure the good quality of paper at very first-time submission

MODULE-1:

Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness.

MODULE-2:

Clarifying Who Did What, Highlighting Your Findings, Hedging and Criticizing, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts. Introduction

MODULE-3:

Review of the Literature, Methods, Results, Discussion, Conclusions, the Final Check

MODULE-4:

Key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Review of the Literature

MODULE-5:

Skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the Conclusions.

MODULE-6:

Useful phrases, how to ensure paper is as good as it could possibly be the first- time submission

Course Outcomes:

CODE: AUD-02A

SUBJECT NAME: Disaster Management

NO OF CREDITS:

M.TECH SEMESTER IV

SESSIONAL: 25

L T P

THEORY EXAM: 75

3 0 0

TOTAL : 100

Pre-requisites:

Course Objectives:

Students will be able to

1. learn to demonstrate a critical understanding of key concepts in disaster risk reduction and humanitarian response.
2. critically evaluate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.
3. develop an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
4. critically understand the strengths and weaknesses of disaster management approaches, planning and programming in different countries, particularly their home country or the countries they work in

MODULE-1: Introduction

Disaster: Definition, Factors And Significance; Difference Between Hazard And Disaster; Natural And Manmade Disasters: Difference, Nature, Types And Magnitude.

MODULE-2: Repercussions Of Disasters And Hazards

Economic Damage, Loss Of Human And Animal Life, Destruction Of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts And Famines, Landslides And Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks And Spills, Outbreaks Of Disease And Epidemics, War And Conflicts.

MODULE-3: Disaster Prone Areas In India

Study Of Seismic Zones; Areas Prone To Floods And Droughts, Landslides And Avalanches; Areas Prone To Cyclonic And Coastal Hazards With Special Reference To Tsunami; Post-Disaster Diseases And Epidemics.

MODULE-4: Disaster Preparedness And Management

Preparedness: Monitoring Of Phenomena Triggering A Disaster Or Hazard; Evaluation Of Risk: Application Of Remote Sensing, Data From Meteorological And Other Agencies, Media Reports: Governmental And Community Preparedness.

MODULE-5: Risk Assessment

Disaster Risk: Concept And Elements, Disaster Risk Reduction, Global And National Disaster Risk Situation. Techniques Of Risk Assessment, Global Co-Operation In Risk Assessment And Warning, People's Participation In Risk Assessment. Strategies for Survival.

MODULE-6: Disaster Mitigation

Meaning, Concept And Strategies Of Disaster Mitigation, Emerging Trends In Mitigation. Structural Mitigation And Non-Structural Mitigation, Programs Of Disaster Mitigation In India.

Course Outcomes:

REFERENCES

1. R. Nishith, Singh AK, "Disaster Management in India: Perspectives, issues and strategies" New Royal book Company.
2. Sahni, Pardeep Et. Al. (Eds.), "Disaster Mitigation Experiences And Reflections", Prentice Hall Of India, New Delhi.

CODE: AUD-03A

SUBJECT NAME: Sanskrit for Technical Knowledge

NO OF CREDITS:

M.TECH SEMESTER IV

SESSIONAL: 25

L T P

THEORY EXAM: 75

3 0 0

TOTAL : 100

Pre-requisites:

Course Objectives:

1. To get a working knowledge in illustrious Sanskrit, the scientific language in the world.
2. Learning of Sanskrit to improve brain functioning.
3. Learning of Sanskrit to develop the logic in mathematics, science & other subjects enhancing the memory power.
4. The engineering scholars equipped with Sanskrit will be able to explore the huge knowledge from ancient literature

MODULE-1:

Alphabets in Sanskrit, Past/Present/Future Tense, Simple Sentences

MODULE-2:

Order, Introduction of roots, Technical information about Sanskrit Literature

MODULE-3:

Technical concepts of Engineering-Electrical, Mechanical, Architecture, Mathematics

Course Outcomes:

After completion of course, students would be able to:

- Understanding basic Sanskrit language.
- Ancient Sanskrit literature about science & technology can be understood.
- Being a logical language will help to develop logic in students

REFERENCES

1. “Abhyaspustakam” – Dr.Vishwas, Samskrita-Bharti Publication, New Delhi
2. “Teach Yourself Sanskrit” PrathamaDeeksha-VempatiKutumbshastri, RashtriyaSanskritSansthanam, New Delhi Publication

CODE: AUD-04A

SUBJECT NAME: Value Education

NO OF CREDITS:

M.TECH SEMESTER IV

SESSIONAL: 25

L T P

THEORY EXAM: 75

3 0 0

TOTAL : 100

Pre-requisites:

Course Objectives:

Students will be able to

1. Understand value of education and self- development.
2. Imbibe good values in students.
3. Let the should know about the importance of

MODULE-1:

Values and self-development –Social values and individual attitudes, Work ethics, Indian vision of humanism, Moral and non- moral valuation, Standards and principles, Value Judgments

MODULE-2:

Importance of cultivation of values, Sense of duty. Devotion, Self-reliance, Confidence, Concentration, Truthfulness, Cleanliness, Honesty, Humanity, Power of faith, National Unity, Patriotism, Love for nature, Discipline

MODULE-3:

Personality and Behavior Development - Soul and Scientific attitude, Positive Thinking, Integrity and discipline, Punctuality, Love and Kindness, Avoid fault Thinking, Free from anger, Dignity of labour, Universal brotherhood and religious tolerance, True friendship, Happiness Vs suffering, love for truth, Aware of self-destructive habits, Association and Cooperation, Doing best for saving nature

MODULE-4:

Character and Competence –Holy books vs Blind faith, Self-management and Good health, Science of reincarnation, Equality, Nonviolence ,Humility, Role of Women, All religions and same message, Mind your Mind, Self-control, Honesty, Studying effectively

Course Outcomes:

After completion of course, students would be able to:

- Knowledge of self-development
- Learn the importance of Human values
- Developing the overall personality.

CODE: AUD-05A

SUBJECT NAME: Constitution of India

NO OF CREDITS:

M.TECH SEMESTER IV

SESSIONAL: 25

L T P

THEORY EXAM: 75

3 0 0

TOTAL : 100

Pre-requisites:

Course Objectives:

Students will be able to:

1. Understand the premises informing the twin themes of liberty and freedom from a civil rights
2. To address the growth of Indian opinion regarding modern Indian intellectuals' constitutional role and entitlement to civil and economic rights as well as the emergence of nationhood in the early years of Indian nationalism.
3. To address the role of socialism in India after the commencement of the Bolshevik Revolution in 1917 and its impact on the initial drafting of the Indian Constitution

MODULE-1: History of Making of the Indian Constitution

History, Drafting Committee, (Composition & Working)

MODULE-2: Philosophy of the Indian Constitution:

Preamble, Salient Features

MODULE-3: Contours of Constitutional Rights & Duties

Fundamental Rights, Right to Equality, Right to Freedom, Right against Exploitation, Right to Freedom of Religion, Cultural and Educational Rights, Right to Constitutional Remedies, Directive Principles of State Policy, Fundamental Duties.

MODULE-4: Organs of Governance

Parliament, Composition, Qualifications and Disqualifications, Powers and Functions, Executive, President, Governor, Council of Ministers, Judiciary, Appointment and Transfer of Judges, Qualifications, Powers and Functions

MODULE-5:Local Administration

District's Administration head: Role and Importance, Municipalities: Introduction, Mayor and role of Elected Representative, CEO of Municipal Corporation, Pachayati raj: Introduction, PRI: ZilaPachayat, Elected officials and their roles, CEO ZilaPachayat: Position and role, Block level: Organizational Hierarchy (Different departments), Village level: Role of Elected and Appointed officials, Importance of grass root democracy

MODULE-6:Election Commission

Election Commission: Role and Functioning, Chief Election Commissioner and Election Commissioners, State Election Commission: Role and Functioning, Institute and Bodies for the welfare of SC/ST/OBC and women

Course Outcomes:

After completion of course, students would be able to:

- Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics.
- Discuss the intellectual origins of the framework of argument that informed the conceptualization of social reforms leading to revolution in India.
- Discuss the intellectual origins of the framework of argument that informed the conceptualization of social reforms leading to revolution in India.
- Discuss the passage of the Hindu Code Bill of 1956

CODE: AUD-06A

SUBJECT NAME: Pedagogy Studies

NO OF CREDITS:

M.TECH SEMESTER IV

SESSIONAL: 25

L T P

THEORY EXAM: 75

3 0 0

TOTAL : 100

Pre-requisites:

Course Objectives:

1. Review existing evidence on the review topic to inform programme design and policymaking undertaken by the DfID, other agencies and researchers.
2. Identify critical evidence gaps to guide the development.

MODULE-1: Introduction and Methodology:

Aims and rationale, Policy background, Conceptual framework and terminology, Theories of learning, Curriculum, Teacher education, Conceptual framework, Research questions, Overview of methodology and Searching

MODULE-2:

Thematic overview: Pedagogical practices are being used by teachers informal and informal classrooms in developing countries, Curriculum, Teacher education

MODULE-3:

Evidence on the effectiveness of pedagogical practices, Methodology for the in depth stage: quality assessment of included studies, How can teacher education (curriculum and practicum) and the school, curriculum and guidance materials best support effective pedagogy?, Theory of change, Strength and nature of the body of evidence for effective pedagogical, practices, Pedagogic theory and pedagogical approaches, Teachers' attitudes and beliefs and Pedagogic strategies

MODULE-4:

Professional development: alignment with classroom practices and follow up support, Peer support, Support from the head teacher and the community, Curriculum and assessment, Barriers to learning: limited resources and large class sizes

MODULE-5: Research gaps and future directions

Research design, Contexts, Pedagogy, Teacher education, Curriculum and assessment, Dissemination and research impact

Course Outcomes:

After completion of course, students would be able to understand

- a. What pedagogical practices are being used by teachers in formal and informal classrooms in developing countries?
- b. What is the evidence on the effectiveness of these pedagogical practices, in what conditions, and with what population of learners?
- c. How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy?
